

BMS- 488043

Drug Class: Entry and Fusion Inhibitors

BMS-488043 is a type of medicine called an entry inhibitor. Entry inhibitors work by blocking HIV from entering human cells.

HIV/AIDS-Related Uses

BMS-488043 is an investigational medicine that is not approved by the FDA for use outside of clinical trials. It was being studied for the prevention and treatment of HIV infection. New studies will focus on a related investigational medicine, BMS-378806, instead of BMS-488043.

This medicine does not cure or prevent HIV infection or AIDS and does not reduce the risk of passing the virus to other people.

Dosage Form/Administration

BMS-488043 is available in capsule and oral solution forms and is taken by mouth. Administration in solution form or with a high fat meal increased exposure in clinical trials.

Contraindications

Individuals should tell a doctor about any medical problems before taking this medicine.

Possible Side Effects

Along with its desired effects, BMS-488043 can cause some unwanted effects. Because this drug has not been studied extensively in people, these effects are not known.

Drug and Food Interactions

A doctor should be notified of any other medications being taken, including prescription, nonprescription (over-the-counter), or herbal medications.

Clinical Trials

For information on clinical trials that involve BMS-488043, visit the ClinicalTrials.gov web site at <http://www.clinicaltrials.gov>. In the Search box, enter: BMS-488043 AND HIV Infections.
